

Project Title:

Connecting Minds - Tutor Finder

Group-21 :

1. [Yuvaraj Tankala AP19110010221](#)
2. [Kaushik Maddula AP19110010178](#)
3. [Saibhuvanesh Suryadevara AP19110010216](#)

Aim :

The main objective of our website is to connect students with educational professionals so that they can communicate with each other on the specified subject the student is facing difficulties and the guide will also be paid on an hourly basis.

Technologies Used :

The front end of the website is served with **HTML, CSS, JavaScript, Bootstrap**

The Middle-Ware connectivity is through **PHP**

The Back-end is built upon **MySQL, XAMPP**

Assumptions Taken :

1. Payments / Transactions which are going to take place on this website are not real.
2. Assuming communication between the student and tutor after the student selects the preferred tutor, was done in 3rd party applications and these will be done out of the system.

Details Handled :

1. Student's name, grade/class, educational institution, contact details, the subject name that he/she was facing difficulty, the maximum amount he/she can spend for an hour to a tutor.
2. Tutor name, educational background[Qualification], subject specialization, achievements, how much amount he/she takes for an hour.

Sample Scenarios:

Connecting minds is a one-stop solution for the people who are in need of a tutor so that the student can interact with a tutor because for many students, the common troubles observed in studies involving that they cannot align well with their teachers and are stuck somewhere.

For a student, the dashboard contains few queries such as the subject which he/she was feeling difficult and FAQ's section for some general information. So the student can submit his query so the system will fetch a list of tutors with the pay range suitable for the student so that the student can select the best tutor by viewing his achievements, qualification s..etc.After selecting the tutor our system will send a request to the tutor with the student's contact details and the student will also receive the tutor's contact details so that they can communicate and this process helps to connect with great minds.

For the tutor, the dashboard will contain the requests sent by the students and he/she can also update his achievements and qualifications so that there will be more chances of being selected by the student.

Who Can Use This Application In Real Life :

This website is for the students who are in need of help in their studies and doubts, students who are in remote areas, and students who are introverts can use this platform and connect to the global tutors and get help from them. This website also offers students to select tutors on an hourly basis so the student can get hands-on experience in a short time.
